950 SER.
HOUSING

Accommodates Rope Sizes From:
0.626" (15.9mm) --- 3.500" (89.0mm)

CoreLube solves the problem of hoist rope fling-off and the labour associated with the clean up.

Comments from the miners after switching to the CoreLube System

- > The rope fling-off and mess has virtually been eliminated.
- > Our previous wire rope grease system was subject to a lot of wastage, with the CoreLube System there is no wastage.
- > Switching over to the CoreLube System has removed the fire hazard caused by excess grease building up under the sheave and on our wood timbers.
- > The maintenance crew found the CoreLube System to be a neater, faster and safer than the grease type system.
- > The old wire rope grease applicator we used, piled up grease like mud under the tread wheels. We cleaned the mess up when we switched to the CoreLube System and from that time on there has been no added mess anywhere. There was a lot of labour spent cleaning up after the old system and money spent to dispose of the barrels of grease. The CoreLube System has completely solved this problem for us.

The Problem Solving Solution of the year.

The miners shown in the photo won \$16,000.00 when they submitted the CoreLube System in a contest put on by their company, for the best overall problem solving solution of the year. They had used two other grease lubricators prior to the CoreLube System.
